SUMMARY

Application Developer skilled in **Python, SQL, REST APIs, backend engineering, and UI development**, with hands-on experience working across the **system architecture** to design and build reliable, scalable, and user-focused applications. Strong understanding of **SDLC, Agile, clean architecture, modular backend design, API development, and cloud fundamentals**. Highly aligned with IBM Consulting's mission of solving real-world problems using **hybrid-cloud, AI-driven, and microservices-ready solutions**.

SKILLS

Languages: Python, JavaScript, C (basic)

Backend: Flask, REST APIs, Jinja, MVC, Authentication, CRUD, Automation Scripts

API & Architecture: API development, clean architecture, modular backend design, microservices foundations, API gateways (conceptual), service integration

UI & Frontend: HTML, CSS, Bootstrap, UI Components, Wireframes/Mockups

Databases: MySQL, SQL Queries, MongoDB (basic), Data Modeling

Tools: Git, GitHub, Postman, Figma

Cloud & Modern Engineering: Cloud fundamentals, API-first design, scalable service patterns

SDLC & Practices: Agile, Design Thinking mindset, Requirement Analysis, Test Case Writing, Debugging, Reusable Code, Version Control

PROBLEM-SOLVING & DSA

- Strong understanding of Arrays, Strings, Hashing, Recursion, Time/Space Complexity
 - Active practice on LeetCode & HackerRank
 - Skilled in debugging, code optimization, and writing efficient algorithms
-

PROJECTS

API-Driven Assistance Management Platform (E-Aundan System)

Tech: Flask, Python, MySQL

- Designed and developed **clean, modular backend code** following SDLC and Agile practices.
- Built secure login, role-based access, and CRUD operations using well-structured APIs.
- Created **MySQL-backed data pipelines** to collect, store, and map application-related data.
- Delivered reusable components and code blocks aligned with **clean-code craftsmanship**.

IoT-Based Water Pollution Monitoring System — API & Data Ingestion Project

Tech: Python, Sensors, SQL, HTML/CSS

- Built Python scripts to **ingest and process real-time sensor data**, similar to Octoflow's ingestion workflows.
- Structured data storage layers and created dashboards with **mapped flow insights**.
- Demonstrated understanding of **data pipelines, ingestion, mapping, and data-driven features**.

Full-Stack Library Management System (End-to-End SDLC)

Tech: Flask, MySQL, Jinja

- Developed Admin/User modules with clean backend architecture using Flask Blueprints.
 - Delivered reusable components following **Agile ceremonies, clean code, and test-based workflows**.
 - Designed SQL-backed storage schemas and API-like endpoints for managing metadata.
-

TRAINING

Web Development Intern — E & ICT Academy, IIT Kanpur (2024)

- Hands-on MERN training; Agile team workflow, version control, and SDLC practices.

Full-Stack Python Trainee — LearnTrail (2025–Present)

- Backend engineering with Python/Flask & Django.
 - Built **API-driven mini-projects**, automation scripts, and structured SQL-backed modules.
-

EDUCATION

Bachelor of Computer Applications (BCA), 2022–2025

SRMCEM College, Lucknow — **CGPA: 7.96**

CERTIFICATIONS

- MERN Stack Development — IIT Kanpur
 - Web Development — Masai School
-

LANGUAGES

English, Hindi
